Cloud & AI Analytics

Google Cloud Datastream

- Serverless and easy-to-use change data capture (CDC) and replication service.
- Datastream gives users the ability to bring source data from a RDBMS and other sources into destinations such as BigQuery and Cloud Storage in near real-time fashion.
- It also supports writing change event stream into Cloud Storage.
- Datastream offers streamlined integration with Dataflow templates
- Loading data into BigQuery will be used
 - Analytics
 - Running Spark jobs

Features of Cloud Datastream

- Streaming data from relational databases
- Reliable pipelines with advanced recovery
- Schema drift resolution
- Unified Avro-based type schema
- Stream historical and CDC data

Use-Cases of Cloud Datastream

- Integration with Databases and SAAS services
- Provides Streaming Analytics
- Provides Near Real-Time Availability for Data Changes
- Used by thousands of customers to replicate their operational data to

BigQuery
