Cloud & AI Analytics

Google Cloud - Transfer Services

- Google Cloud Platform's (GCP) offers a variety of data transfer services designed to move data efficiently into and within its ecosystem.
- **Transfer Service** encompasses a range of services and tools designed to facilitate the movement of data between different systems or locations such as
 - migrating data from Amazon S3,
 - transferring data between Cloud Storage buckets
 - retrieving data from publicly accessible HTTP/HTTPS sources.

Google Cloud - Transfer Services

- These services allow you to
 - Schedule transfers,
 - Apply filters to target specific data
 - Perform data validation during the transfer process,ensuring reliability and precision.

Google Cloud - Transfer Services

- GCP has different transfer services like
 - Storage Transfer Service
 - BigQuery Data Transfer Service
 - Transfer Appliance
 - Database Migration Service

Happy Learning..!

Storage Transfer Services

- Storage Transfer Service automates the transfer of data to, from and between object and file storage systems.
- It includes
 - Google Cloud Storage,
 - Amazon S3,
 - Azure Storage,
 - on-premises data and more.

Storage Transfer Services

- Transfer large amount of data quickly and reliably.
- No Need to write code.
- Centralized job management to monitor transfer status
- Transferring less than 1 TB
 - Use gcloud commands
- Transferring more than 1 TB
 - Use Storage Transfer Service

BigQuery Data Transfer Services

- BigQuery Data Transfer Service automates data movement into BigQuery on a scheduled and managed basis.
- No Need to write code.
- You can access the BigQuery Data Transfer Service using the:
 - Google Cloud console
 - bq command-line tool
 - BigQuery Data Transfer Service API

BigQuery Data Transfer Services

- After configuring a data transfer, the BigQuery Data Transfer Service automatically loads data into BigQuery on a regular basis.
- Supported Data Sources are
 - Cloud Storage
 - Amazon S3
 - Azure Blob Storage
 - Facebook Ads

Transfer Appliance

- Transfer Appliance is a high-capacity storage device that enables you to transfer and securely ship your data to a Google upload facility, where we upload your data to Cloud Storage.
- Transfer Appliances set apart
 - Physical Transfer
 - Secure
 - Scalable
 - Fast and Efficient
 - Integrated

Database Migration Service

- Database Migration Service helps you lift and shift your
 - MySQL
 - PostgreSQL
 - AlloyDB for PostgreSQL
 - Oracle workloads.
- Migrate to open-source databases in the cloud from on-premises, Google Cloud, or other clouds.
